DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-34, drawn to an I/O accessing via a multiplexer, classified in class 710, subclass 51.
 - II. Claims 35-42, drawn to a method for executing memory operation in a computer system using DMA, classified in class 710, subclass 22.
2. The invention are distinct, each from the other because of the following reasons:
3. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the method of invention II can be used to execute memory operation in the computer using DMA and do not require the specific structure of the I/O accessing via the multiplexer as required by invention I.
4. In the event that group I is elected, the following species restriction requirement applies since claims 1, 8, 13 and 24 are generic to a plurality of disclosed patentably distinct species comprising:
 - a memory device interface, claims 3, 10, 19 and 30; and
 - a DMA engine, claims 7, 12, 23 and 34.

Art Unit: 2182

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

5. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
